Examine and
approve the bug

Set priority and
assign to developer

On average,
every single
bug report
is read by
at least
5 people!

You must have the wrong version.

Works fine on my machine.

QA Failed

Fixed. Try now.

QA Failed

Fixed. Try now.

QA Failed (again)

Need more information

But sometimes the bug report is read dozen times!

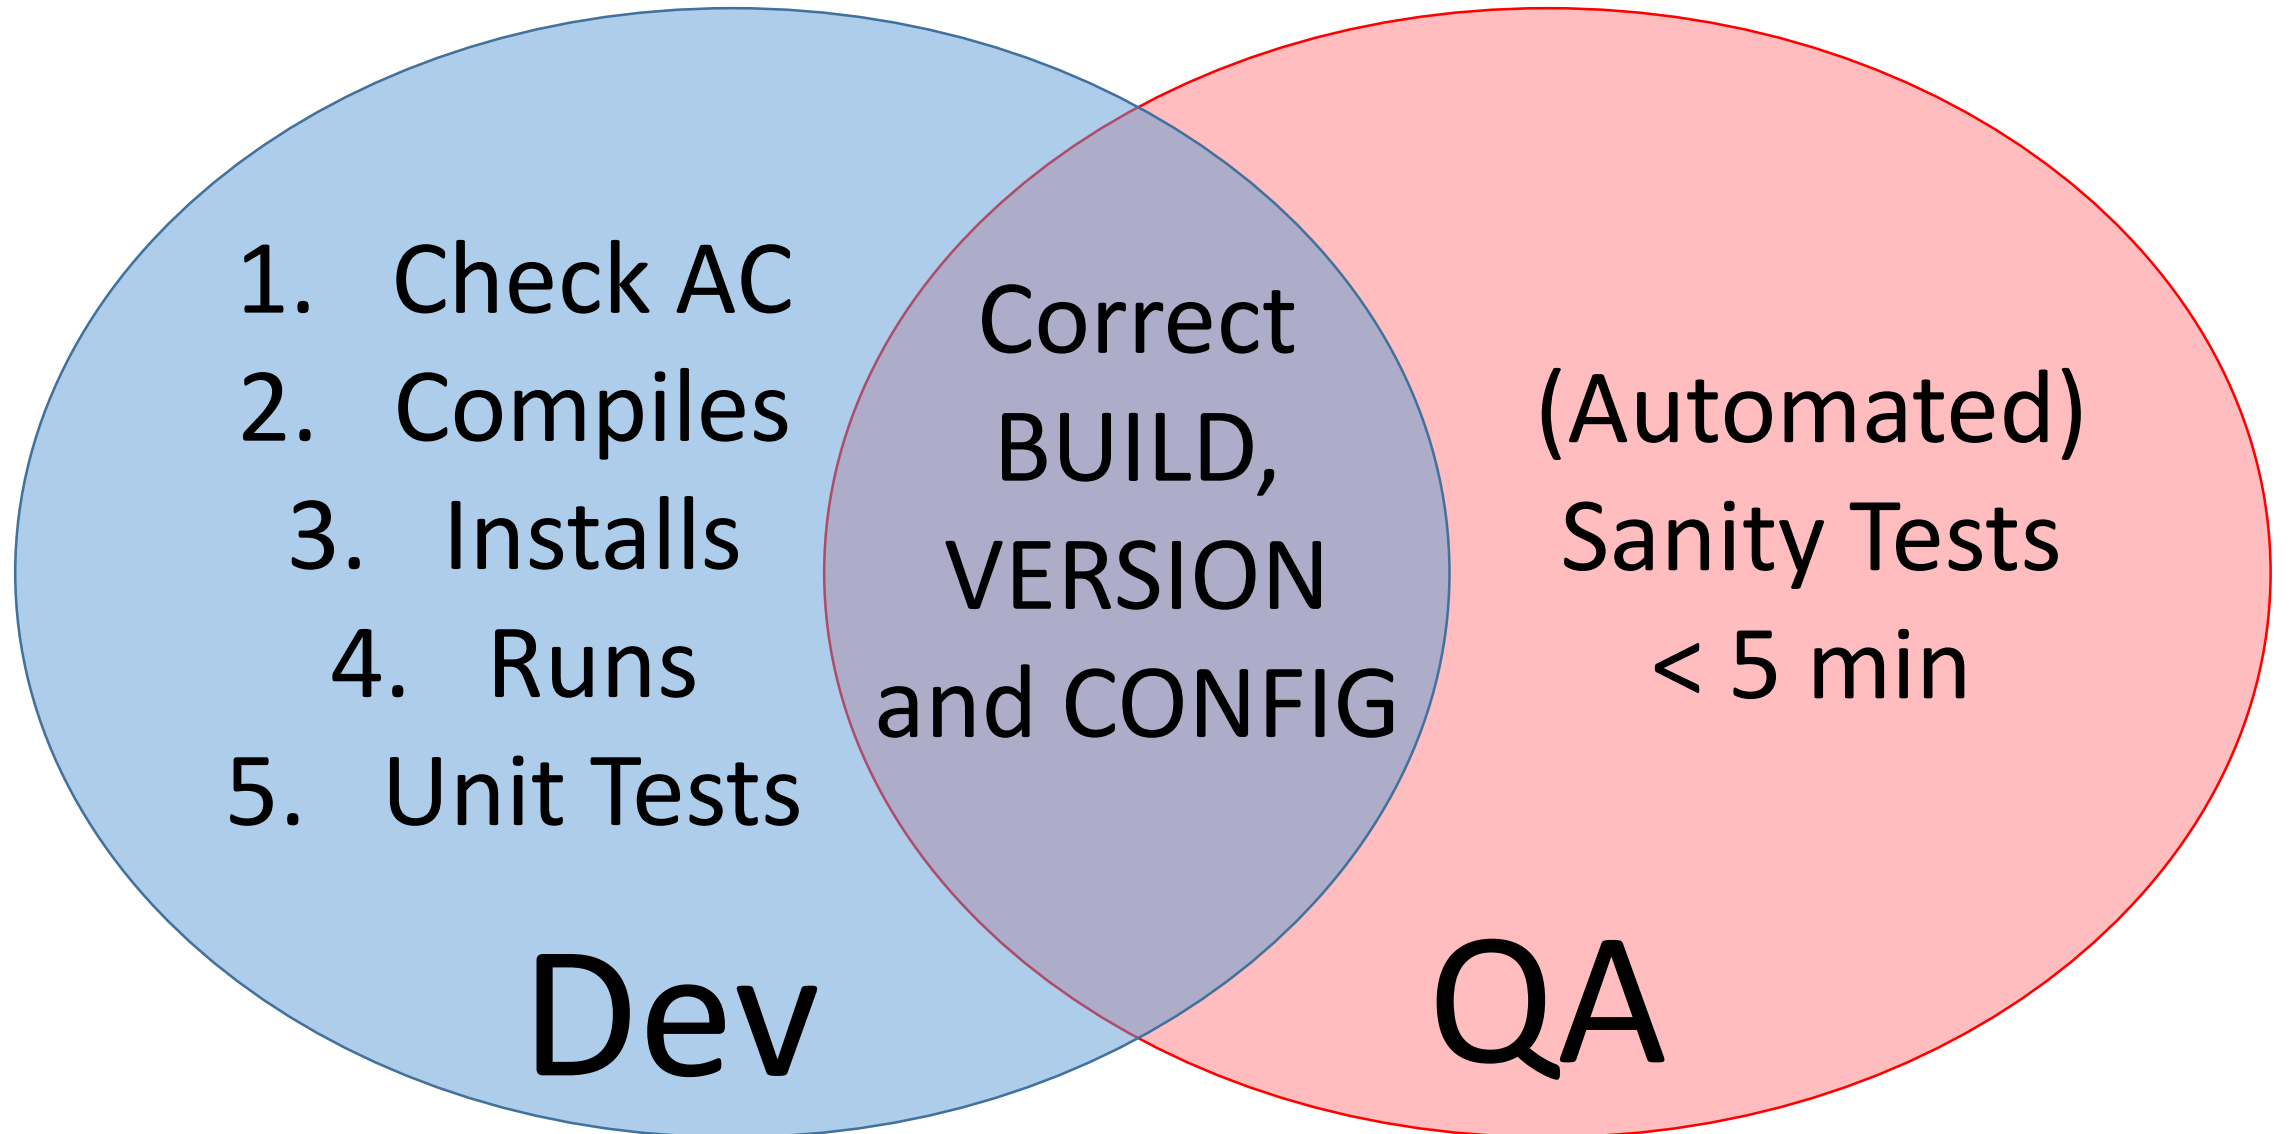

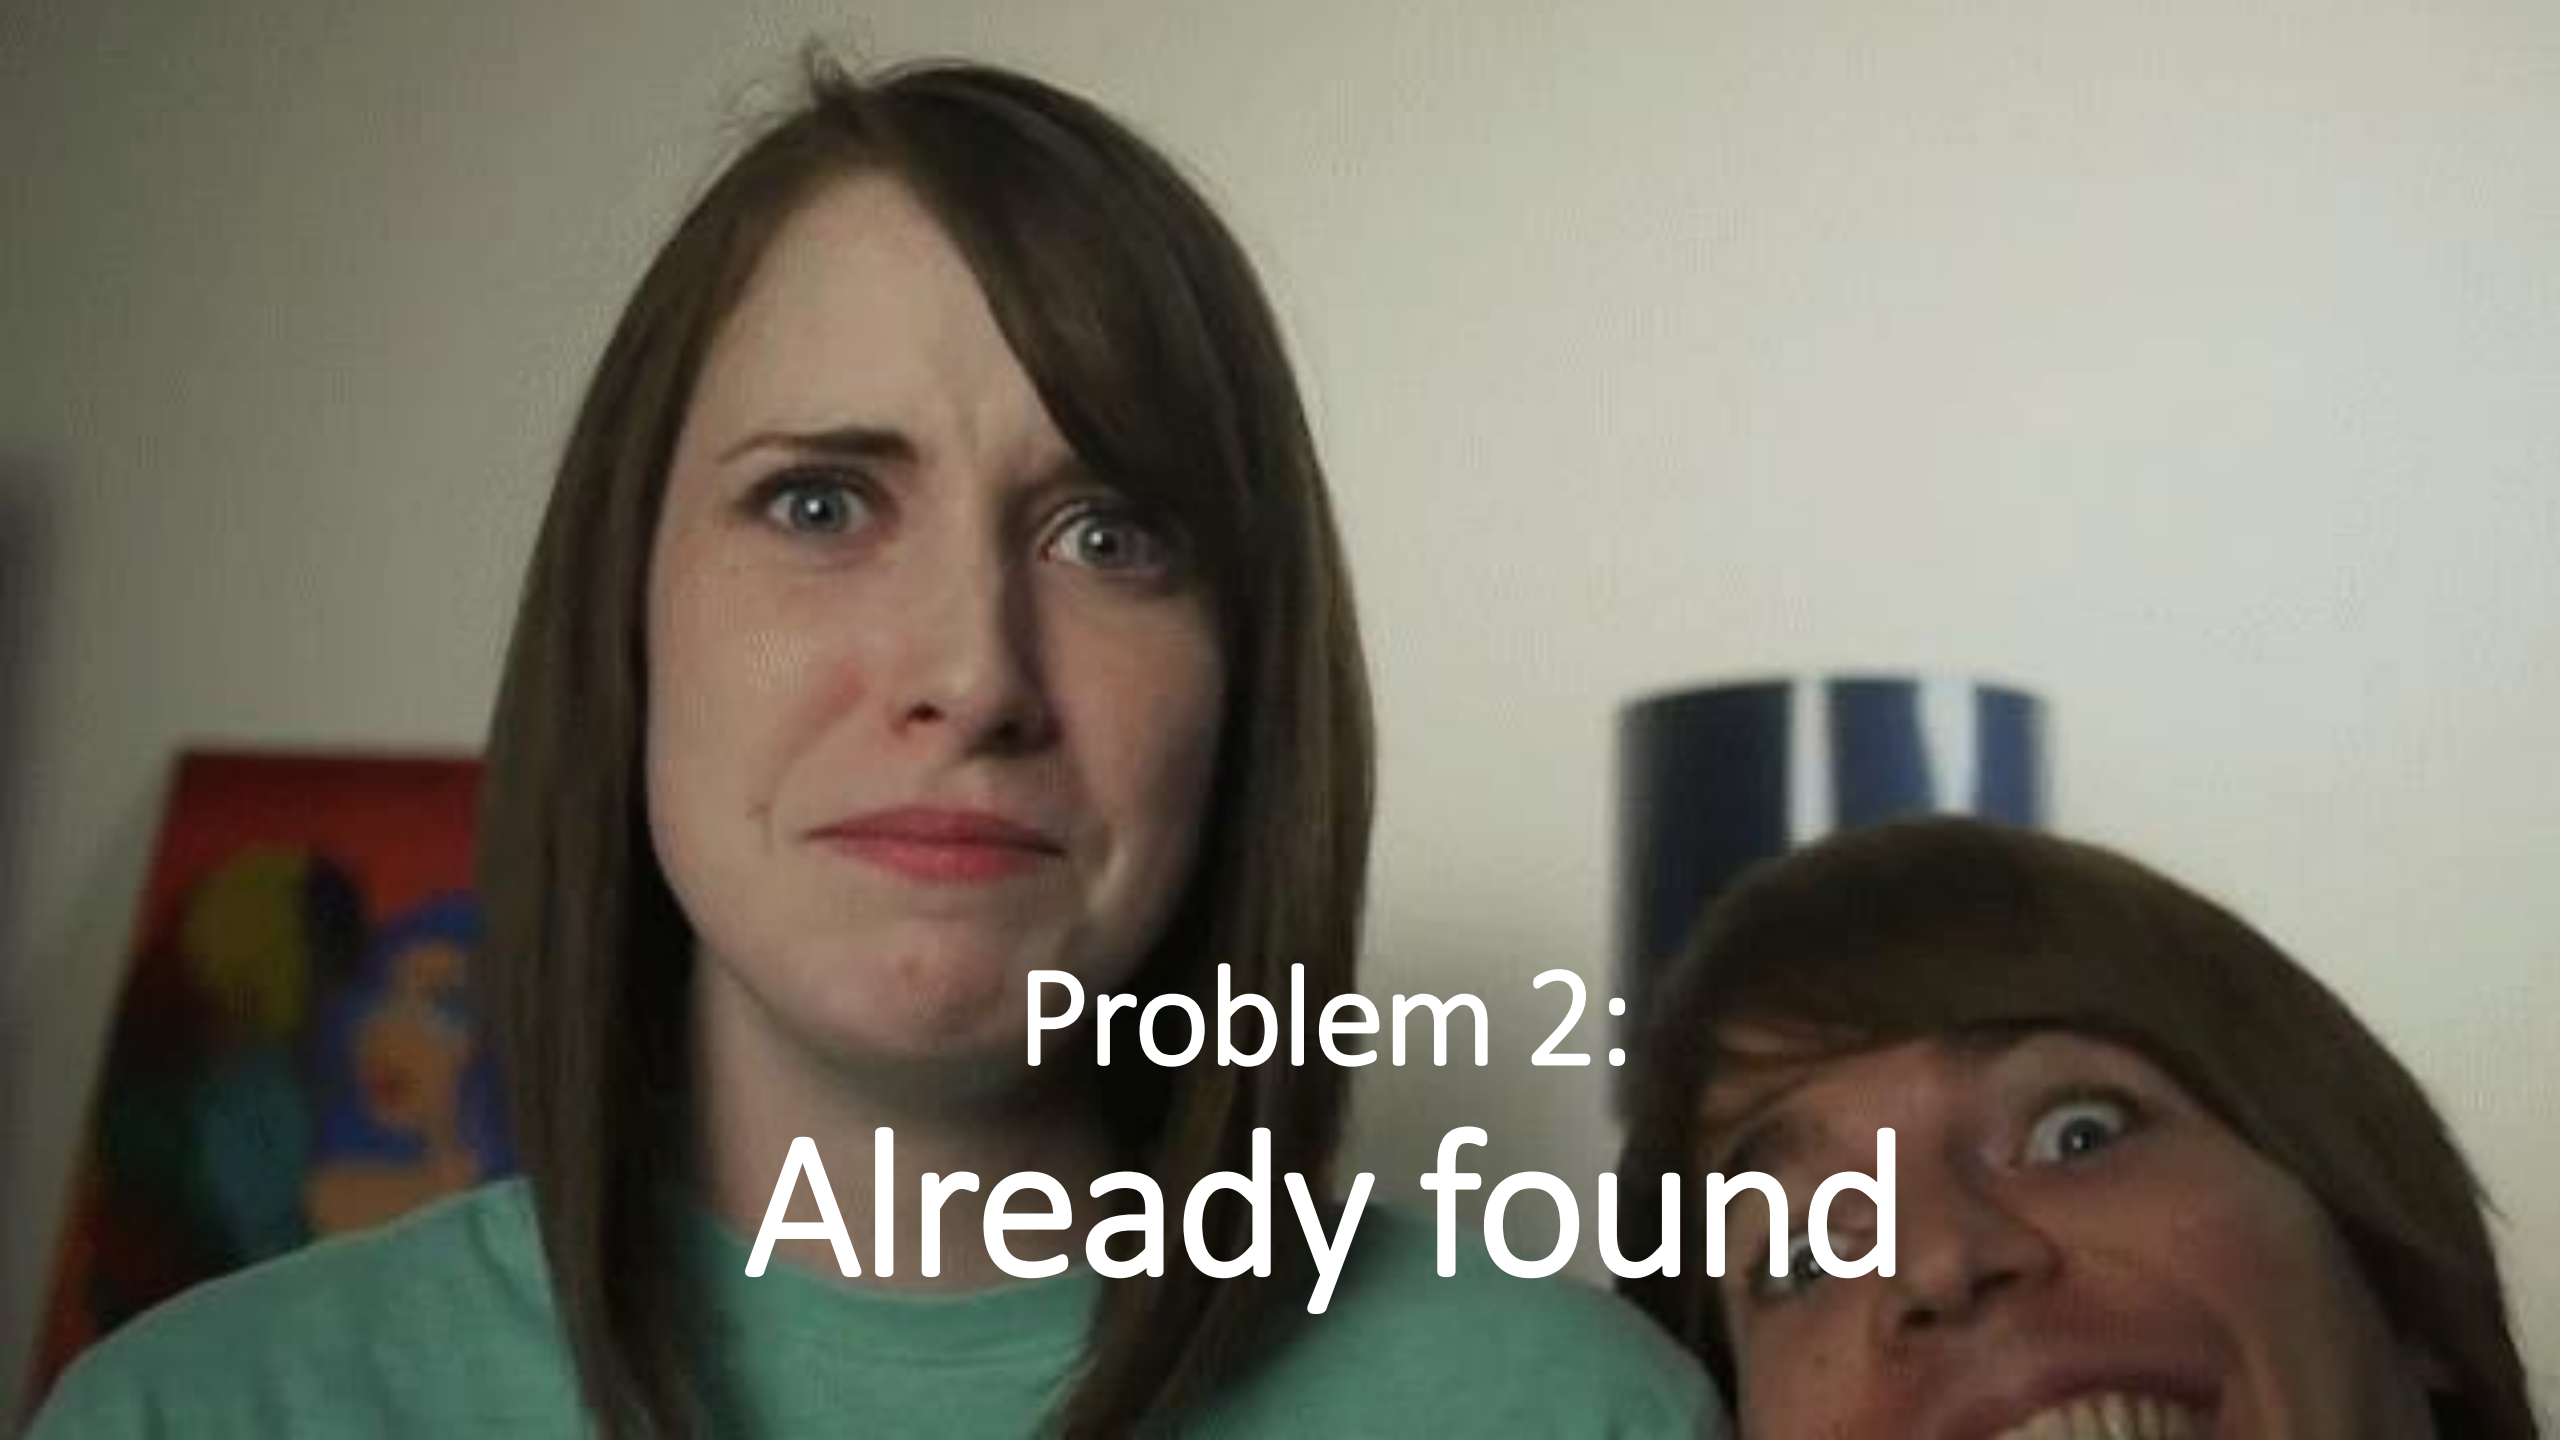

Investing just
3 more minutes
in your bug report
may save **hours**
to the entire team.

Problem 1:
Nothing works at all!

Entry Criteria

A woman with long brown hair and a green shirt looks concerned. A man with a brown wig and a shocked expression is visible in the bottom right corner. The background is a plain wall with a colorful abstract painting on the left and a blue and white striped object on the right.

Problem 2:
Already found

A woman with dark, curly hair, wearing a bright red dress, is shown from the chest up. She has a distressed or angry expression, with furrowed brows and a slightly open mouth. The background is dark and out of focus, suggesting an indoor setting.

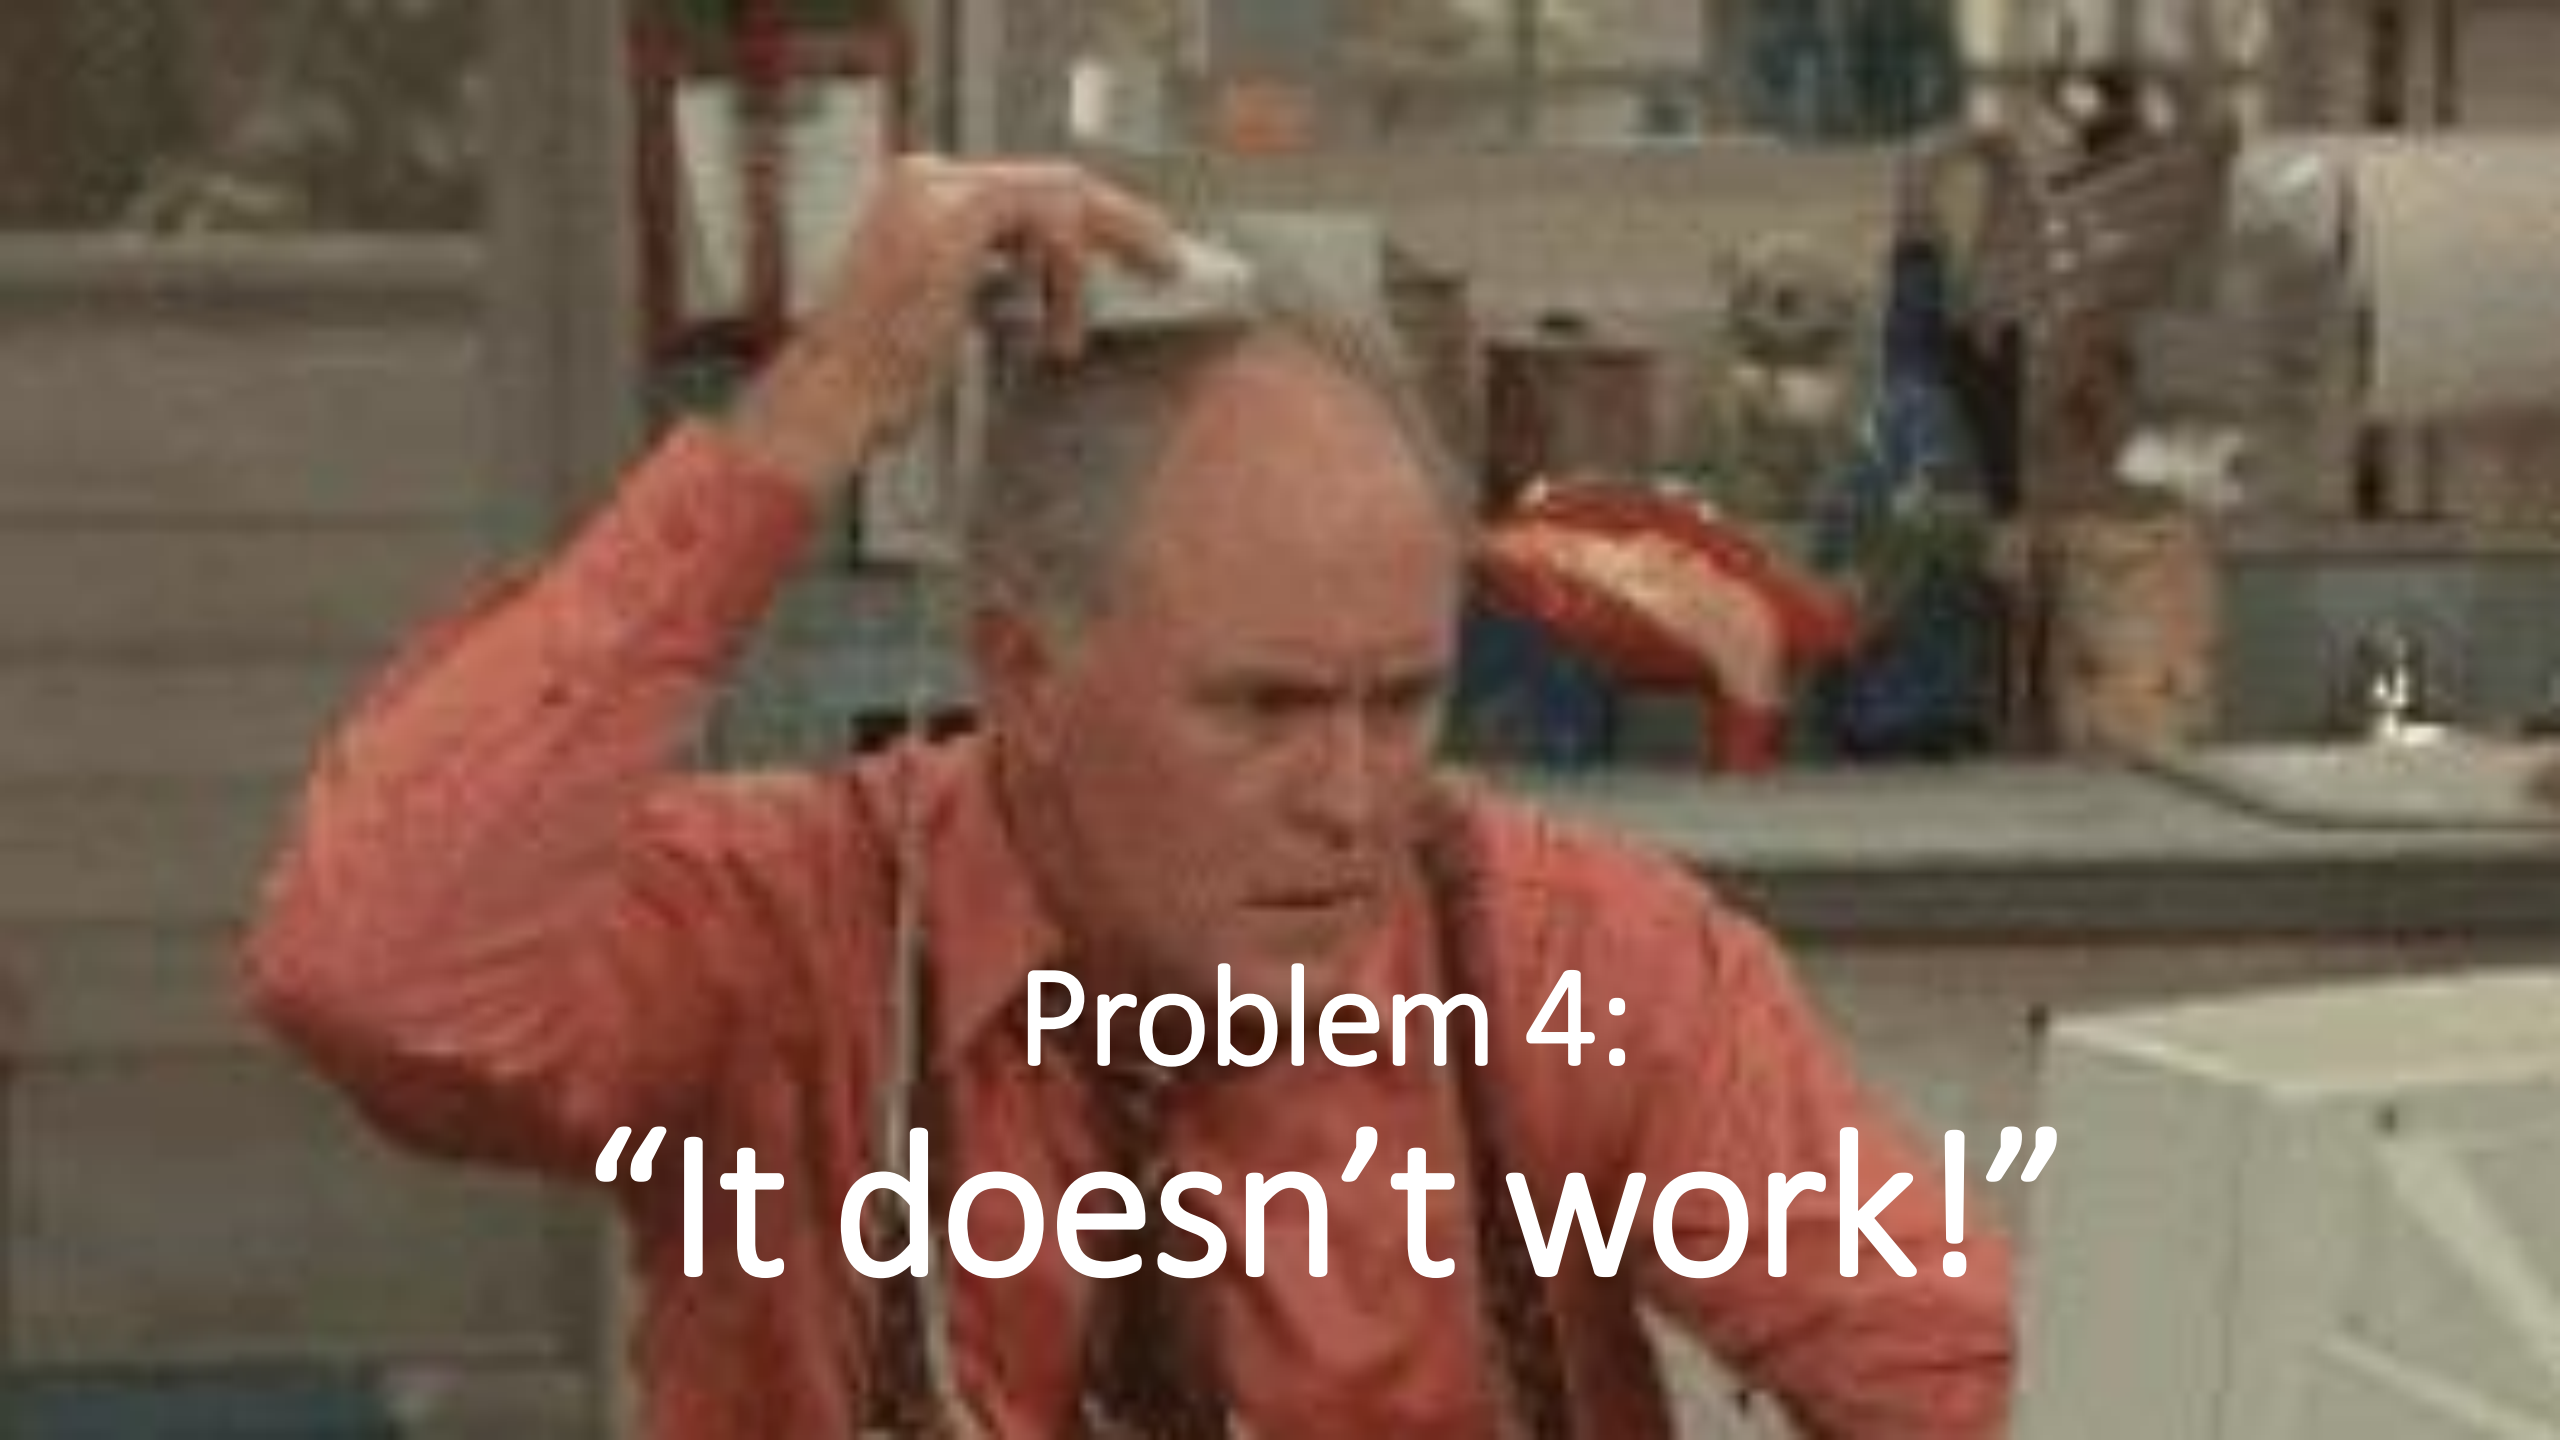

Problem 3:
Are you able to reproduce the bug?

The story
about the six
men and the
dark room

A man with a frustrated expression, wearing a red long-sleeved shirt, is shown in a kitchen. He has his right hand on his head, suggesting a headache or frustration. The background includes a kitchen counter, a sink, and a stove. The text "Problem 4: 'It doesn't work!'" is overlaid on the image in white font.

Problem 4:
“It doesn't work!”

Which one is better?

“I feel unwell”

OR

*“I have headache, runny nose
and 38.5°C temperature
since yesterday”*

Anamnesis

1. Name
2. Age, height, weight
3. Family and childhood history
4. Allergies, work environment
5. Details about the complaints
6. Habits
7. Medical encounters
8. Other useful info

Bug Description

1. Title
2. Priority / Severity
3. Build / Version
4. Environment
5. Steps to reproduce
6. Expected vs. Actual Results
7. Screenshots / Logs
8. Other useful info

Short But Enough Description

One line should say it all:

Canceling a Copy dialog crashes File Manager

Software crashes

Steps to Reproduce

The most important part!

1. Press Cmd+N to open a new browser window

2. Type <https://mail.google.com> in the address bar

3. Press Enter

Open Gmail in another window

Expected vs. Actual Result

Instead of showing my inbox, it shows the message “Your browser does not support cookies (error -91)”.

It doesn't work.

Problem 5:

Setting priority and severity

Priority

Very High

Fix immediately and ASAP, absolutely must fix in 24h.

Notify!!!

High

Must be fixed until the next release cycle

Medium

Fix as part of standard SDLC. Must be fixed before GA.

Low

Could live with it, schedule when time is available.

Very Low

Nice to have. May never fix.

Severity

Blocker (Showstopper)

Serious crash, testing completely blocked, security, data loss

Critical (Severe)

Incorrect calculations, missing features, problems with no workaround, far from expected, unable to test partially

Major (Serious)

Functionality not working but able to test system

Normal (Moderate)

Not meeting criteria, bad UI/UX, missing images/messages

Minor (Trivial)

Very minor UI/UX or cosmetic issues, typos, proposals

QA team sets severity and
proposes priority

Product team can amend
priority later.

Priority / Severity Mapping Script

- If **both** are set, good.
- If **one** is set, **map the other** to it.
- If **none** is set, **disallow publishing** the bug report.

If possible:

Require
PRIORITY/SEVERITY

but do **NOT** set a
default value

Bug distribution by priority in an average company when the default value is **Medium**:

Problem 6: Testing in Incorrect Environment

Environment / Versions

Include information about the environment and all software related to the project you are testing.

Semantic versioning (semver.org)

MAJOR.**MINOR**.**PATCH**.EXTENSION

incrementing

- **MAJOR** when you make incompatible API changes,
- **MINOR** when you add functionality in a backwards-compatible manner, and
- **PATCH** when you make backwards-compatible bug fixes.

Problem 7:

Providing screenshots and videos

- Good bug report has at least 1 screenshot (or video), but only if appropriate.
- Logs and/or stack traces should be provided only if they are related to the defect and can be used as a source of information.
- If you think there are other sources of valuable information about the defect, include these sources as well.
- Give more information rather than less.

My favourite FREE tools I am using:

For screenshots capturing:

getgreenshot.org

For video capturing:

tinytake.com

Can one report a bug without giving steps to reproduce, expected results and actual results?

Can you find out
what is the
problem with
this patient
without asking
them anything?

Handling several issues at once

Bugs often have dependencies

Bug #415

Bug #416

Bug #417

Do not forget to link issues!

Bug #418

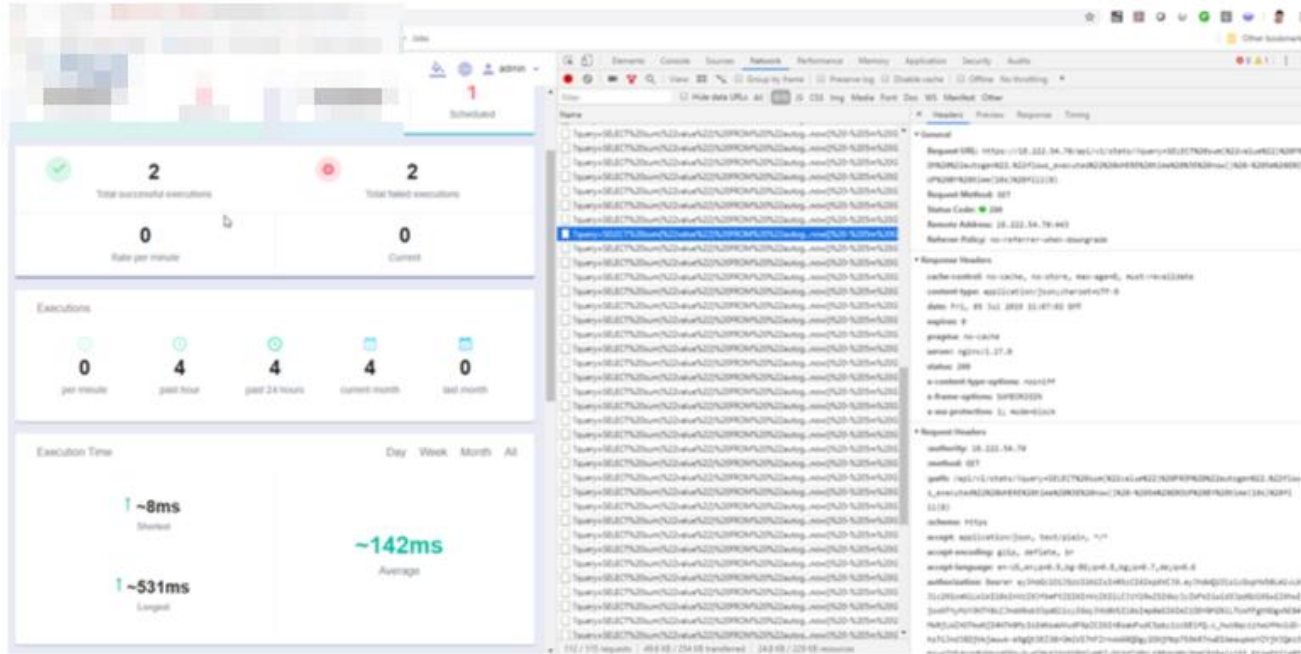

Bug #419

Bug #420

Overview

Currently SQL queries are executed as parameter of the HTTP query:

Why this is a bad practice?

SQL Injection (SQLi) is a type of an injection attack that makes it possible to execute malicious SQL statements and gain control on a database server behind a web application. Attackers can use SQL Injection vulnerabilities to bypass application security measures (authentication and authorization) and retrieve, add, modify or delete the content of the entire SQL database.

The application code should never use the input directly. The visibility of any database info (such as queries, records, tables or errors) must be turned off.

For more information, see:

- https://www.owasp.org/index.php/SQL_Injection
- [https://www.owasp.org/index.php/Testing_for_HTTP_Parameter_pollution_\(OTG-INPVAL-004\)](https://www.owasp.org/index.php/Testing_for_HTTP_Parameter_pollution_(OTG-INPVAL-004))

MODIFIED

...

```
212 212         if (job.month && job.month.includes(',')) {
213 213             this.selectedMonths = job.month.split(',').map(x => +x);
214 214         }
215 +         // else ==> PNT-571 if just one month is selected
215 216     }
216 217
217 218     private setSelectedDaysOfWeek(job: JobModel): void {
218 219         if (job.dayOfWeek && job.dayOfWeek.includes(',')) {
219 220             this.selectedWeekdays = job.dayOfWeek.split(',').map(x => +x);
220 221         }
222 +         // else ==> PNT-571 if just one day of week is selected
221 223     }
222 224
223 225     private listenForUseDefaultParamsChange(): void {
```

Problem 9:
Being too scientific

(Especially valid for developers)

-  API request to CDN forces re-fetch from origin Azure Storage that invalidates CC header set for the blob on ARM when BSP is enabled together with ZDF.
-  Old website logo is loaded instead of the rebranded one

Problem 10:
Stop before it's too late

Know when to stop

DBData was accidentally deleted.

DBData was accidentally deleted.

I tried reinstalling the software and defragmented the HDD but nothing helped.

Problem 11:
Be able to restore!

Always have a backup plan

Use virtual machines or containers, create snapshots and backups, and revert when needed.

Test [on production] without having way to go back if something goes wrong.

Admin can "kill themselves" by removing the system/ permission

Description

Overview

Admin is able to remove the **system/** role in **Admin/Roles Management/Admin**.

As the **system/** role does not appear in the left pane list, admin loses control over the entire system.

Steps to Reproduce

1. Login as admin.
2. Go to **Admin/Roles Management**.
3. Choose **admin** role.
4. Under **Actions** column, click on the vertical ellipsis (:).
5. **Warning! This will make you lose admin rights on the system!** Choose **Delete**.
6. Note that you can no longer see flows and most of the menus are empty.

Expected result

The role **system/** must be always visible on the left pane for admins.

Actual result

Admin cannot get their **system/** role permission back.

Policy restrictions should not affect admins - that is why this is a backend development task.

Recovery

The only possible recovery is from the database by running the following SQL query:

```
1 INSERT INTO [redacted]
2 SELECT id, true, true, "system/"
3 FROM [redacted]
4 WHERE name='admin';
```

Additional Information

See the screenshots attached.

Problem 12:
Finding the best balance

Doctors don't want patients to tell them their diagnosis

Distinguish:

1. Facts

What is **ACTUALLY** happening.

2. Observations

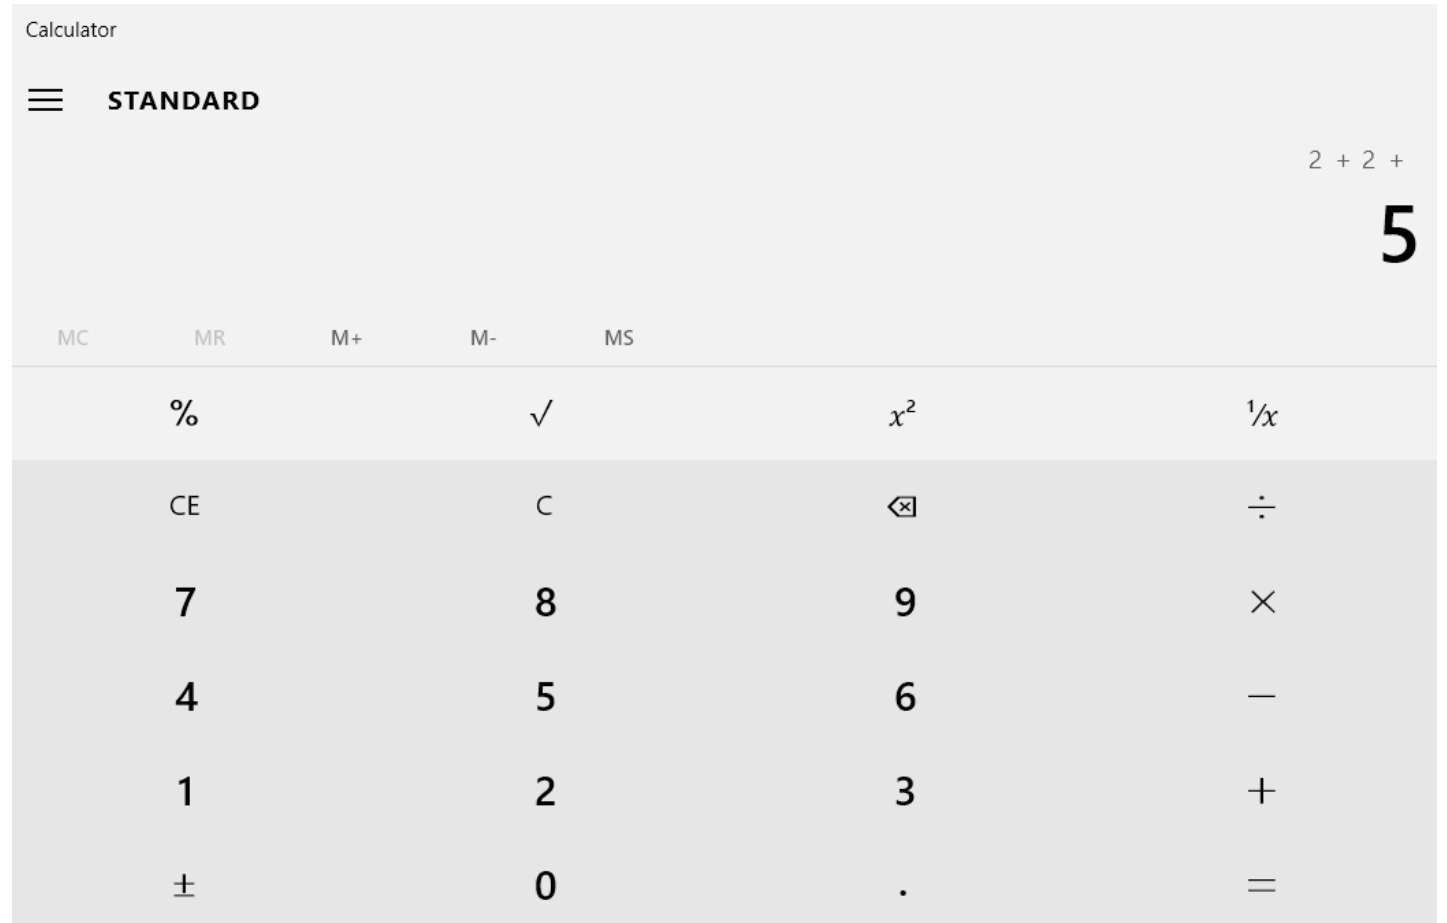

What **YOU THINK** is happening.

A photograph of a monkey sitting in a black office chair at a desk, using a silver laptop. The monkey is looking at the screen and has its hands on the keyboard. The background is a reddish-brown wall.

Problem 13:
Formatting your reports

Windows
Calculator:
 $2+2=5$

Description

Go to Windows Calculator, type 2, enter plus, insert 2 and then press = and see that the result is 5, then i tried $3+3$, $1+1$, $4+4$, $2+3$, $3+2$, $8+6$ the last 3 worked.

Add headings and sections

Steps to reproduce

Go to Windows Calculator, type 2, enter plus, insert 2 and then press = and see that the result is 5

Expected result

$2+2=4$

Actual result

$2+2=5$

Other

I tried $3+3$, $1+1$, $4+4$, $2+3$, $3+2$, $8+6$, and only the last 3 worked.

Bullet and numbers in front of items

Steps to reproduce

1. Go to Windows Calculator,
2. Type 2
3. Enter plus
4. Insert 2
5. Press =

Expected result

$2+2=4$

Actual result

$2+2=5$

Other

I also tried:

- 3+3,
- 1+1,
- 4+4,
- 2+3,
- 3+2,
- 8+6,

and only the last 3 worked.

If the order of items is important, use a numbered list.

Otherwise, use a bulleted list.

Minify and be consistent

Steps to Reproduce

1. Go to Windows Calculator
2. In the editbox, type 2+2
3. Press Enter.

Expected Result

$2+2=4$

Actual Result

$2+2=5$

Other

I tried:

- 1+1, 2+2, 3+3, 4+4 - incorrect result
- 2+3, 3+2, 8+6 - correct result

Observation: Wrong result produced only when using two equal numbers.

Use **bold**, *italic* and monospaced

Steps to Reproduce

1. Go to **Windows Calculator**.
2. In the editbox, type

2+2

3. Press **ENTER**.

Expected Result

2+2=4

Actual Result

2+2=5

Other

I tried:

- 1+1, 2+2, 3+3, 4+4 - incorrect result
- 2+3, 3+2, 8+6 - correct result

Observation: *Wrong result produced only when using two equal numbers.*

Use traffic lights logic

GREEN – for good things

RED – for bad things

Just compare now...

Steps to Reproduce

1. Go to **Windows Calculator**.
2. In the editbox, type

2+2

3. Press **ENTER**.

Expected Result

2+2=4

Actual Result

2+2=5

Other

I tried:

- 1+1, 2+2, 3+3, 4+4 - **incorrect** result
- 2+3, 3+2, 8+6 - **correct** result

Observation: *Wrong result produced only when using two equal numbers.*

Go to Windows Calculator, type 2, enter plus, insert 2 and then press = and see that the result is 5, then i tried 3+3, 1+1, 4+4, 2+3, 3+2, 8+6 the last 3 worked.

pumpkins carving people

If a sentence has one condition, place the condition before the action.

If the disk is full, delete the file.

Delete the file if the disk is full.

Avoid including a long series of items in a sentence.
Use a list or table instead.

Test the following features:

- Create text
- Edit text
- Format text

Test creating text, editing text and
formatting text.

Avoid vague or ambiguous pronominal references.

When you delete an item from the table, the system deletes all values that are assigned to this item.

When you delete an item from the table, all of its assigned values are deleted.

Whose values? Table's or system's ones?

If possible, avoid noun strings, that is, a series of nouns that modify one another.

Check the port signals from the device adapter card.

Check the device adapter card port signals.

Avoid redundancies.
